

FOR IMMEDIATE RELEASE

PSIvet and VEA- Veterinary Exam Assistant Announce Innovative Program to Enhance Veterinary Practice Efficiency

Washington, DC – April 8, 2025 – PSIvet, the premier veterinary group purchasing organization supporting independent veterinary practices, has partnered with Veterinarian Exam Assistant (VEA) to launch a groundbreaking pilot program aimed at streamlining workflows and enhancing patient care through AI-driven automation.

This strategic collaboration will provide PSIvet members with access to VEA's cutting-edge platform, designed to automate clinical documentation, optimize treatment plans, and integrate seamlessly with practice management systems. The pilot will allow participating clinics to experience firsthand how VEA reduces administrative burdens and enhances efficiency, allowing veterinarians to focus more on patient care.

"PSIvet is committed to equipping independent veterinary practices with the tools and resources they need to thrive in an increasingly competitive industry," said Jeff Baker, Sr. Director Sales, & Strategic Partnerships. "By partnering with VEA, we're bringing our members a powerful AI-driven solution that enhances workflow efficiency, increases revenue opportunities, and ultimately improves patient outcomes."

Through this pilot program, select PSIvet member clinics will gain six months of complimentary access to VEA, providing them with the opportunity to integrate the platform into their daily operations and measure its impact on productivity, documentation accuracy, and client engagement.

"VEA was created to revolutionize veterinary workflows by leveraging AI to automate clinical documentation, treatment planning, and the adoption and education of therapeutics," said Trish Porter, Founder & CEO of VEA. "Partnering with PSIvet allows us to empower independent veterinary practices with the technology they need to stay competitive while maintaining exceptional patient care."

The pilot program officially launches in March 2025, with initial clinics onboarded throughout the spring. PSIvet and VEA will gather feedback from participating practices to refine the platform's features and further tailor it to the needs of independent veterinarians.
